

Madrid, a 27 de Mayo de 2015

Estimados compañeros,

Siguiendo las directrices que marca la Sociedad Internacional de Ondas de Choque, la ISMST (www.ismst.org) y la Federación Iberoamericana ONLAT (www.onlat.org) y tal como se aprobó en Asamblea General del 3º Congreso SETOC en Octubre 2014, las recomendaciones que SETOC manifiesta respecto del tratamiento mediante ondas de choque son:

ONDAS DE CHOQUE FOCALIZADAS O DESFOCALIZADAS

- Generadores: piezoeléctrico, electromagnético, electrohidráulico
- Indicaciones: ver web ISMST (www.ismst.org)
- Aplicación: médicos entrenados

ONDAS DE CHOQUE RADIALES

- Generadores: presión de aire
- Indicaciones: tendinopatías superficiales y patología muscular
- Aplicación: médicos entrenados; fisioterapeutas, kinesiólogos y enfermeras pueden realizar tratamiento tras un diagnóstico médico.

Atentamente,

Dra. Karin Freitag
Presidente SETOC

Dr. José Eid

General Secretary of the International Society
for Medical Shockwave Treatment

Linz, April 25th 2015

To Whom It May Concern,

The Managing Board of the ISMST has decided to support only one Shockwave Society per country with respect to its activity, namely educational and scientific, congresses organized and finally the number of members.

Under these circumstances the resolution for Spain is that the ISMST has cancelled the cooperation with SEOCE and that the courses of SEOCE are not running with the agreement or under the auspices of the ISMST.

Therefore the links to SEOCE have been removed from our ISMST websites.

The ISMST supports SETOC as its official national partner, especially as SETOC is organizing the ISMST Congress in 2017 in Spain.

Sincerely,

Dr. José Eid
ISMST General Secretary
